PART 2.

Financial and Technical Assistance Provided by the
Department of Agriculture and the
Department of Housing and Urban Development
for
Nonmetropolitan Planning Districts
in Fiscal Year
1973

FOURTH ANNUAL REPORT TO THE CONGRESS
(Pursuant to Title IX, Section 901
of the Agricultural Act of 1970)

U. S. Department of Agriculture
U. S. Department of Housing and Urban Development
Washington, D. C.

March 1, 1974

To the President of the Senate and the Speaker of the House:

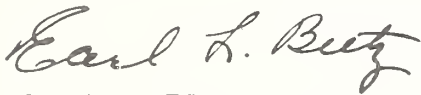

We are transmitting herewith the fourth annual report on financial and technical assistance provided by our two Departments in FY 1973 for nonmetropolitan planning districts as authorized by P. L. 90-448. This report is submitted pursuant to Title IX, Section 901(c) of P. L. 91-524.

In summary, the report shows that in FY 1973 the Department of Housing and Urban Development extended grants to 44 States totalling nearly \$8.4 million for planning programs of 277 nonmetropolitan districts. This was a 7 percent increase in the number of districts funded compared with the total for FY 1972. The Department of Agriculture, through its field staffs and associated State agencies, contributed an estimated 416 man-years of professional and administrative services to the organization and operation of district programs.

With passage of the Rural Development Act and General Revenue Sharing legislation in 1972 and with the proposed Responsive Governments Act and legislation for Special Revenue Sharing and National Land Use Policy and Planning now before the Congress, it is of critical importance that we re-evaluate the Federal role in these programs and determine how we can better assist general governments (particularly States) serving rural communities to develop the capacity to plan and manage public programs more efficiently.

We trust that you will find this report to be informative and useful.

Sincerely,

EARL L. BUTZ
Secretary of Agriculture

JAMES T. LYNN
Secretary of Housing and
Urban Development

REPORT ON ASSISTANCE FOR NONMETROPOLITAN PLANNING DISTRICTS IN FY 1973

Section I: OVERVIEW

Public Law 90-448, the Housing and Urban Development Act of 1968, authorized the Secretary of Housing and Urban Development to make grants to States for comprehensive planning programs of nonmetropolitan districts. The Secretary of Agriculture was authorized to provide technical assistance in connection with the establishment of districts and the operation of their programs. A district was defined in the Act as all or part of one or more counties and one or more other units of general local government, but not including any portion of a metropolitan area. HUD guidelines further state that a district should normally comprise several counties and cities with related geographic features and common problems and opportunities.

In the 5 years since the joint HUD-Agriculture assistance program was established as a result of this legislation, there has been a steady increase in the total amount of planning monies provided by HUD for districts and of man-years of technical assistance contributed by the Department of Agriculture field staffs and those of associated State agencies, such as Extension Services and forestry departments. This assistance has been an important factor in the accelerating use of areawide agencies representing several counties to establish land-use and comprehensive planning programs for nonurban and urbanizing rural communities. It has also encouraged cooperation among local governments to improve areawide planning and implement plans through local government action. ^{1/} The joint HUD-Agriculture assistance program for nonmetropolitan districts is a noteworthy example of intergovernmental cooperation at the Federal level to stimulate direct action by State and local governments that will increase the capability of the latter to plan for and administer public programs more effectively.

Since P. L. 90-448 was enacted, there has been a rapid growth of areawide planning and other programs aimed at solving problems in the public sector that cross traditional jurisdictional boundaries. Many Federal planning assistance programs in such fields as health, transportation, law enforcement, and environmental quality now require areawide multijurisdictional agencies. The Department of Agriculture's Soil Conservation Service (SCS) has steadily increased its assistance for Resource Conservation and Development projects, with the aim of encouraging cooperation among rural counties to solve resource

^{1/} In Section III, page 17, some typical nonmetropolitan planning district programs are described.

problems. The U. S. Office of Management and Budget has consistently enlarged the scope of Circular A-95, which offers State governments an opportunity to establish Statewide and substate regional clearinghouses to review project proposals that will be funded by Federal agencies. As of September 1, 1973, there were 246 such clearinghouses serving nonmetropolitan areas. Interstate regional commissions, such as the Appalachian Commission, are also using multi-jurisdictional areawide agencies extensively for local planning and program delivery.

State initiatives in recent years have paralleled Federal incentives and requirements to establish multicounty planning organizations. By the end of June 1973, 44 State governments had taken action, through executive order or legislative mandate, to delineate a system of planning and development districts covering the entire State. These were both urban and nonurban in character. A total of 516 districts were included in these State systems, of which 388 were organized and staffed and about the same number were being funded from State or local sources, in addition to Federal (table 3).

In FY 1973, the Department of Housing and Urban Development made grants totalling \$8,390,596 to 44 States to assist in the comprehensive planning programs of nonmetropolitan districts. This was a larger amount than in any other year since the joint HUD-Agriculture program was started in FY 1969. A total of 277 nonmetropolitan districts, including Economic Development Districts, received funding, 17 more than in FY 1972 (table 1).

Table 1--Summary: HUD assistance for Nonmetropolitan Planning Districts, FY 1969-1973

Item	:	1969	1970	1971	1972	1973
Number of States receiving funds.....	:	19	34	34	42	44
Number of districts supported.....	:	61	131	155	260	277
Amount (\$ million).....	:	\$1.4	\$2.8	\$3.4	\$7.7	\$8.4

HUD grants may not exceed two-thirds of the total cost of the district planning activities for which funds are made available, except for Economic Development Districts and Local Development Districts (Appalachian), which are eligible for grants totalling 75 percent of the cost. Funds for nonmetropolitan districts are generally provided through State planning or other designated agencies. The following principal work elements of district programs are funded by HUD:

- Areawide comprehensive land-use planning.
- Land-use planning assistance for local governments in the area.
- Capital improvements programming.
- Areawide housing studies and programming.
- Updating overall planning program designs.
- Regional sewer and water planning.
- Economic and social base studies.
- General administration.

Department of Agriculture and associated State agencies in FY 1973 supported the programs of nonmetropolitan districts with an estimated 416.1 man-years of professional and administrative services. This represented a 31 percent increase over the amount for the previous year. Of particular importance in district agency programs were the Department's contributions in land-use planning, resource management and development, environmental quality programming, community education and information, and implementation of housing and public works plans of districts. 2/

In FY 1973 the Department of Agriculture also initiated major administrative and planning actions to build more effective working relations with nonmetropolitan district agencies and to utilize their services in programming Department-supported projects at the local level.

In June 1973 the Acting Administrator of the Farmers Home Administration (FmHA) requested State directors of the agency to inaugurate action to assure effective liaison between FmHA and substate planning districts. As a first step in the process, the FmHA directors were advised to adjust certain administrative boundaries of the agency to bring these in line with boundaries of the planning districts.

Since the start of the joint HUD-Agriculture program, FmHA has served as the coordinating and lead agency in the Department of Agriculture and has provided modest amounts from its appropriation to other agencies of the Department for demonstration work in connection with planning activities of selected districts. 3/

Where possible, State Extension Services have also taken action to bring their administrative boundaries into conformance with those of planning districts. Extension community resource development agents are working under cooperative agreements with the staffs of district planning agencies in many States.

Soil Conservation Service is providing planning, technical, and financial assistance for an increasing number of locally directed Resource Conservation and Development (RC&D) projects. In FY 1973 the number of such projects being assisted in the planning and operational stage by SCS and other Department agencies increased to 123, compared with 98 in FY 1972 and 78 in FY 1971. SCS requires that Governors approve applications for new RC&D projects, in part to

2/ See table 2 and Section II for a detailed explanation of Department of Agriculture services.

3/ See Section II, part 3.

insure conformance with official State planning district boundaries. The SCS Administrator has also directed the agency's State conservationists to advise sponsors of new RC&D applications for program assistance that the geographic area of the proposed RC&D project should conform to established district or regional boundaries unless there is clear justification for not doing so and that arrangements be made for cooperation between the sponsor and the district planning agency. A total of 216 arrangements in 42 States are presently in effect.

The Forest Service has entered into 17 agreements in 15 States to provide accelerated forest conservation development and assistance to State planning agencies and in selected nonmetropolitan districts. The States are Arkansas, Colorado, Georgia, Kentucky, Minnesota, Montana, New Mexico, Pennsylvania, South Carolina, Tennessee, Texas, Utah, Virginia, Washington, and Wisconsin. The approximate funding involved is \$200,000 in Federal funds, matched by \$40,000 in State-appropriated funds. In several States forestry departments have established a special program of cooperation with substate planning districts without additional Federal assistance. The Forest Service now has a specific policy of providing specialized planning assistance covering forest and related lands to State planning agencies and multicounty and county planning commissions.

The Rural Development Act of 1972 (P. L. 92-419) gives further impetus to the increasing cooperation between field staffs of the Department of Agriculture and associated State agencies on the one hand and planning district agencies on the other. Public Law 92-419 authorizes financial, educational, and technical assistance for district and other planning agencies serving rural communities. It also requires that community facility projects receiving financial assistance under the Act be in conformance with an areawide development plan.

Department of Agriculture regulations to implement the various new programs authorized by P. L. 92-419 include specific reference to the role of planning districts. District agencies will review and comment on proposed development projects financed with insured and guaranteed loans. Their services will also be utilized to insure that projects financed under the Act implement long-range development plans of the region served by the planning agency and are in conformance with local codes and ordinances governing land use. The Department's regulations concerning rural development policies and guidelines, published in October 1973, state: "Procedures for implementing the Act are designed to give the fullest possible consideration to planning and development goals and strategies at the State and multicounty jurisdictional levels."

The Department's Rural Development Service, an agency under the Assistant Secretary for Rural Development, is establishing an office to coordinate assistance for planning districts and to take the lead in encouraging Department-planning district cooperation.

A major result of the HUD-Agriculture assistance program in the past 5 years has been to insure that nonmetropolitan planning districts are organized and funded at a minimum level and are utilizing the many Department of

Agriculture technical and educational services available in rural areas to launch and maintain effective areawide planning programs. Financial and other assistance of the Department for specific development projects, such as community services, sewer and water systems, public utility construction, rural housing, and small watersheds, have also helped implement important elements of development plans prepared by district agencies. In this 5-year period, HUD contributed approximately \$24,000,000 in planning monies for districts; the Department of Agriculture contributed the equivalent of an estimated 990 man-years of professional and administrative support in the three fiscal years 1971-1973.

In the Housing and Urban Development Act of 1968, P. L. 90-448, the preamble to amendments establishing an assistance program for nonmetropolitan planning districts states that the purpose is "to assist State and local governments in solving planning problems, including those resulting from the increasing concentration of population in metropolitan and other urban areas and the out-migration from and lack of coordinated development of resources and services in rural areas; to facilitate comprehensive planning for urban and rural development, including coordinated transportation systems, on a continuing basis by such governments; and to encourage such governments to establish and improve planning staffs and techniques on an areawide basis..."

An appraisal of the HUD-Agriculture program's impact in rural communities and success in realizing the ambitious goals set forth in the preamble will be undertaken by the Department of Agriculture as an important aspect of future evaluations of rural development and related programs. Evident progress has been made in strengthening planning programs of local rural communities and promoting cooperation among them to solve common problems. There are, however, certain major problems which future evaluations and studies will need to explore in detail. These include:

- The performance of State and local governments in supporting planning district programs from general revenues at a level adequate for the required activity. (Approximately 60 percent of the funds for planning districts is presently derived from Federal sources.)

- The absence of program implementing authority by district organizations, which must look to member governments and other public agencies to translate areawide plans into the reality of projects, programs, and governmental ordinances influencing land use and development. (It needs to be pointed out that the executive directors and board chairmen of many districts would consider this a strength, not a weakness.)

- Demands on the time and attention of Department of Agriculture field staffs, which often prevent them from contributing the amount and kind of technical and advisory services district agency personnel believe is necessary.

- Physical factors, such as long distances or natural barriers, that make travel within the district difficult and raise serious obstacles to routine and necessary communication among planners and administrators.

-- A lack of support from local public officials and citizen leaders in some communities due in part to misunderstanding of a planning district's role and potential contribution and in part to a feeling that here is another "layer" of government aimed at sapping local control and responsibility.

-- Legal, administrative, and technical problems of coordination between the programs and objectives of substate districts that cross State boundaries and those of areawide programs lying wholly within a State but overlapping the interstate area. (Most of these are metropolitan in character, however.)

In September 1973, HUD submitted to the Congress the proposed Responsive Governments Act, designed to sustain the achievements of the comprehensive planning assistance program, correct its deficiencies, and introduce new features appropriate to the needs of America's communities in the 1970's. The Act would provide steps for improving planning and management at all levels of government.

Table 2--Technical and educational services of Department of Agriculture and cooperating State agencies in support of Nonmetropolitan Planning Districts in FY 1973 ^{1/}

Services Provided and Agency Responsible	Area of Service Input (in man-years)		
	National	State	Planning District
(Soil Conservation Service) Technical information and interpretations concerning soil and water resources; assistance in the establishment and operation of regional planning programs.	---	32.1	116.2
(Farmers Home Administration) Information and guidance on housing development, planning of community services, and loan and grant financing for community development; assistance in the organization and operation of regional planning programs.	1.5	9.2	25.3
(Rural Electrification Administration) Advisory services to electric and telephone borrowers participating in and supporting regional planning programs.	---	---	1.0
(U. S. Forest Service and cooperating State forestry agencies) Technical information and guidance, data interpretations, and other planning aids related to forest resources.	0.8	26.0	42.0
(Cooperative Extension Services) Educational assistance to State and local agencies in the organization and implementation of regional planning programs; participation in the operation of such programs, with particular emphasis on community relations, intergovernmental coordination, and plan implementation.	0.4	24.0	<u>2/</u> 132.0
(Economic Research Service) Establishment and operation of an information and analytic system on district planning by State and nationally.	3.3	2.3	---
TOTAL	6.0	93.6	316.5

^{1/} Data in table covers Department and cooperating State agency contributions to Statewide regional programming in all States and to the 277 nonmetropolitan planning districts (including Economic Development Districts) funded by HUD. An expanded list of all services of the Department and cooperating State agencies to support planning programs of nonmetropolitan districts will be found in Section II, part 1.

^{2/} Includes portion of time of Extension community resource development personnel serving area of funded nonmetropolitan districts and of county Extension personnel in area who assisted in various elements of district programs.

Section II, Part 1: TECHNICAL AND EDUCATIONAL ASSISTANCE FURNISHED BY THE
DEPARTMENT OF AGRICULTURE AND ASSOCIATED AGENCIES AND
ORGANIZATIONS FOR NONMETROPOLITAN PLANNING DISTRICTS

SOIL CONSERVATION SERVICE

- Assists State and local officials in organizing districts.
- Provides information and technical services supporting programs of districts:
 - Soils information and interpretations.
 - Water impoundment inventories.
 - Watershed data including flood plain delineations.
 - Environmental corridor inventories.
 - Critical erosion areas.
 - Recreation inventories and appraisals.
 - Conservation needs inventories.
- Provides technical assistance in planning and development of following projects:
 - Land and water management; erosion and sediment control; flood prevention and stream channel stabilization; open space, recreation and wildlife development; pollution control; development of sanitary land fill and sewage treatment facilities; location of transportation routes and industrial sites; and housing and community development. (Financial assistance may also be available for some of these purposes in authorized watershed and Resource Conservation and Development project areas.)
- Provides comprehensive planning assistance for community development including:
 - Land use planning.
 - Assistance with ordinances for erosion and sediment control and zoning.
 - Multiple use of soil and water resources.
- Furnishes information on available programs and aiding rural community leaders in preparing requests for assistance.
- Provides assistance for development and preservation of recreation areas and historic sites.
- Cooperates with districts in carrying out provisions of Office of Management and Budget Circular A-95 through the appropriate clearinghouses.
- Encourages local conservation program officials to serve on planning district policy and technical committees and to develop joint programs and projects between district planning agencies and Resource Conservation and Development project groups.

EXTENSION SERVICES OF LAND GRANT UNIVERSITIES

- Provide community development specialists to work with district agencies on specific projects.
- Assist in organizing and establishing district planning agencies and in carrying out work programs.
- Conduct community educational programs on public affairs and planning issues.
- Provide a channel for obtaining technical assistance from various departments of State Land Grant Universities.

FOREST SERVICE

- Provides:
 - Specialized forestry assistance in cooperation with State forestry departments to insure the orderly development and best use of forest resources in the planning district area.
 - Technology for forest-based industrial and recreational development.
 - Forest inventory and resource data.
- Assists in identifying and studying environmental problems and advises on environmental impact studies and reports.

FARMERS HOME ADMINISTRATION

- Provides information on rural housing needs and building industry potential in rural areas of the districts.
- Cooperates in preparing functional plans for housing and community services.
- Provides loans for eligible housing, community service and business and industrial projects.
- Assists the district agency in informing elected officials and citizen leaders of the need for more effective land-use planning, zoning ordinances, subdivision controls, building codes, and other measures to influence development in the public interest.
- Cooperates with district technical personnel to upgrade the home building industry and to organize regional housing agencies.

RURAL ELECTRIFICATION ADMINISTRATION BORROWERS (Electric Cooperatives and Telephone Organizations)

- Provide data on electric and telephone needs and services.
- Serve on the policy boards of planning districts.

RURAL ELECTRIFICATION ADMINISTRATION BORROWERS--Con.

- Provide space in issuances to convey information to the public on district activities.
- Promote priority development activities in the areawide plan by:
 - Organizing local development corporations.
 - Publicizing resources of the area.
 - Conducting labor supply surveys.
 - Seeking technical assistance and financing for prospective businesses and industries.
 - Forming associations to meet specific development needs, such as rural water or fire systems.
 - Performing survey and other support work for rural housing studies of the district.
 - Leading community campaigns to secure new or improved services or facilities that may be an important element in the comprehensive plan.

ECONOMIC RESEARCH SERVICE

- Furnishes reports and studies useful in preparing functional and comprehensive plans, including:
 - Tabulations and summaries of population changes and migration rates by county and substate area.
 - Surveys of the hired farm work force.
 - Analyses of underemployment and levels of income by county.
 - Economic analysis of specific geographic areas, including prospects for expanding nonfarm employment opportunities and the economic and social impact of industrialization on the area.
 - Case studies concerning economic, social, and governmental problems facing people in rural communities.

STATE EXPERIMENT STATIONS

- Provide research data on a variety of subjects related to the social, economic, and physical development of rural communities in the State.
- Provide technical assistance for district agencies on specific planning and research projects concerning which the Station staff may have special expertise.

RURAL DEVELOPMENT SERVICE

- Coordinates Department programs of technical, educational, and financial assistance in support of nonmetropolitan district programs.
- Assists district agencies, as appropriate, to make effective use of Departmental field services and programs.

Section II, Part 2: EXAMPLES OF DEPARTMENT OF AGRICULTURE TECHNICAL
AND EDUCATIONAL ASSISTANCE TO DISTRICTS IN FY 1973

ALABAMA -- The Alabama Extension Service established geographic areas for its rural resource development specialists to approximate as closely as possible those of the planning districts. The Soil Conservation Service (SCS) participated in the preparation of river basin water quality management plans, land-use plans, and comprehensive plans of small cities. Farmers Home Administration (FmHA) assisted a district agency in preparing an application for Federal funding of a 10-county solid waste, water, and sewer management plan.

COLORADO -- SCS assisted districts by providing soil, land-use, flood plain, and sedimentation maps. The Colorado Extension Service conducted training workshops in communitywide planning for local leaders, planning commissions, elected officials, and agency representatives.

GEORGIA -- The Georgia Extension Service districts have been restructured to conform to boundaries of the State's 18 Area Planning and Development Commissions (APDC's). Long-range plans and arrangements have been completed for the assignment of an Extension Service agent in community resource development to work with each of three APDC agencies, and the Extension Service and Association of APDC Directors have signed a memorandum of understanding concerning working arrangements between the Commissions and Extension.

IOWA -- Department of Agriculture and associated agency personnel are assisting in the organization of planning district programs. The Iowa Extension Service, for example, is providing area statistics and data, developing examples of regional commission action in problem solving, and conducting meetings and community planning sessions to encourage knowledge of and interest in areawide programs.

KANSAS -- The Department of Agriculture and associated agencies established regional resource committees for each of the planning districts in Kansas. SCS adjusted the boundaries of some administrative districts to make the areas served by their administrators conform to the Kansas planning district regions.

KENTUCKY -- Extension Service adjusted its area boundaries to follow the State's planning district boundaries. Planning district agencies received extensive assistance through soil survey interpretations, water resource inventories, recreational potential studies, and land-use data of SCS.

MICHIGAN -- FmHA assisted a district planning agency to plan and develop a water system for the small town of Kaleva, Michigan. Because of the inadequacy of the town water system, high insurance rates were forcing the local furniture factory to relocate, which would have caused the loss of jobs for many residents of the town and the surrounding area.

MINNESOTA -- A member of the Forest Service serves on the staff of the Arrowhead Regional Commission to assist in developing and implementing a land-use plan for this heavily wooded area.

MISSOURI -- In one district area, Department of Agriculture agencies, plus the Missouri Extension Service, assisted the district agency to organize and conduct a program to inform community leaders of methods to handle solid waste disposal, a critical problem in the area.

NEW MEXICO -- FmHA is assisting the Middle Rio Grande Council of Governments in developing a master land-use plan for the Albuquerque Corridor Area along the Rio Grande River. FmHA supplies information on land suitable for agricultural production, housing development and community services that may be required to meet the needs of growing communities. FmHA has also worked with the Southern Rio Grande Council of Governments and Dona Anna County in planning the area's housing development.

NEW YORK -- Communities in the Southern Tier Central Regional Planning and Development District were hard hit by Hurricane Agnes in June 1972. Department of Agriculture agencies became an integral part of the Office of Emergency Preparedness (OEP) disaster relief team. When OEP terminated its activity in the region, the district agency assumed responsibility for reconstruction. The Department team, including the New York Extension Service, worked closely with the district to provide vital assistance in water resources, emergency farm aid, community development, housing, and emergency preparedness.

OKLAHOMA -- SCS has assigned a staff member to provide technical assistance to the Oklahoma State Planning Agency and planning districts.

PENNSYLVANIA -- Department of Agriculture personnel assisted the Northern Tier Regional Planning and Development Commission in preparing and publicizing a subdivision ordinance for use in the five-county area. The ordinance and an erosion-and-sediment-control handbook are being presented to municipal officials in the region in a series of training seminars, conducted jointly by personnel of the planning district, the Department, and the Extension Service.

SOUTH CAROLINA -- FmHA helped the Upper Savannah Regional Planning Commission in establishing a water resources commission for a water district in one county. FmHA assisted in a study of the area's needs, drafting the legislation creating the commission, and arranging for a loan and grant to fund the installation of 358 miles of distribution line.

TEXAS -- SCS prepared soil interpretations for several districts (termed councils of governments in the State) which were useful in comprehensive planning for recreational areas, roads, greenbelts, residential areas, areas of light industry, shopping centers, and areas suitable for sanitary landfills.

UTAH -- A resource inventory was prepared in one district area as a result of widespread concern over unplanned and uncontrolled development of mountainland. Based on maps and data prepared with the aid of Department of Agriculture personnel, one county rewrote its planning and zoning ordinances to tighten controls on development. The resource inventory also has become important in preparation of the area's comprehensive plan, which is now in the final stages.

VIRGINIA -- SCS assigned personnel to perform a liaison function with each of the State's 22 planning districts. They will coordinate inputs of soils and other resource inventory data and information in local land-use planning programs. The Extension Service assigned two full-time agents to work with the district agency in one region.

Section II, Part 3: USE OF SPECIAL FUND FOR ADMINISTRATION, CLEARINGHOUSE, AND DEMONSTRATION PROJECTS

As the lead agency in the Department of Agriculture with respect to planning district activities, Farmers Home Administration was responsible in FY 1973 for necessary administrative, coordinating, and liaison functions. In addition, FmHA transferred \$350,000 from its appropriation to other agencies of the Department for demonstration work in connection with planning activities of district agencies. The following summarizes the use of these funds by individual agencies concerned in FY 1973.

Forest Service: Foresters were assigned on a demonstration basis to multicounty districts in Georgia, Colorado, Washington, Montana, and Minnesota.

Rural Electrification Administration: A survey was made of REA-financed electric and telephone systems to determine the extent to which local systems were providing assistance to local planning bodies--for example, furnishing maps of electric and telephone service lines, and service by officials of rural electric and telephone cooperatives on the boards of directors of local planning districts.

Economic Research Service: This agency continued to assemble and disseminate current information and supporting research findings on the situation and status of multicounty districts.

Soil Conservation Service: SCS increased its assistance in providing soil survey information and interpretive data, including maps, for use by nonmetropolitan planning agencies in land-use planning.

Extension Service: Special State programs were funded in Oregon, South Carolina, and Wisconsin to place community resource development specialists in pilot projects to assist nonmetropolitan districts with planning and development work.

Section III: REPRESENTATIVE NONMETROPOLITAN PLANNING DISTRICT PROGRAMS

LENOWISCO (Virginia)

The LENOWISCO Planning District Commission is an organization of Lee, Wise, and Scott Counties and the City of Norton in Southwest Virginia, whose mission is to carry out cooperative planning and development activities beyond the financial and staff capabilities of the four political subdivisions. It is located in Duffield.

The organization is an "umbrella" planning agency, i.e., it performs work under a variety of programs. LENOWISCO is thus designated an official planning district by the State of Virginia, an Economic Development District by the U. S. Economic Development Administration, a Local Development District by the Appalachian Regional Commission, an area planning organization by the Department of Housing and Urban Development, and a tributary area development agency by the Tennessee Valley Authority. It is also the regional clearinghouse to meet the requirements of the U. S. Office of Management and Budget Circular A-95.

The agency's principal sources of funding are the Virginia Division of Planning and Community Affairs, the Economic Development Administration, Appalachian Regional Commission, Virginia Division of Justice and Crime Prevention, U. S. Department of Housing and Urban Development, and the U. S. Environmental Protection Agency. It also performs contract work for the State water control board.

LENOWISCO is governed by a board of fifteen elected officials and members appointed by the boards of supervisors of participating counties as well as the City of Norton and Big Stone Gap. The agency has a staff of 23 full-time employees, including an executive director and his deputy and five professional planners and supporting staff. The area served is in the heart of the Appalachian region and includes 1,400 square miles of rugged mountainous terrain, with approximately 85,000 inhabitants.

The LENOWISCO staff conducts an extensive program of land use and associated planning for communities within the region, as well as on a regional basis; undertakes the planning and initial programming of specific development projects, such as an industrial site or water system construction; is responsible for environmental improvement programs within the area, direct technical assistance to local governments in administration and management, and an areawide economic development program.

In 1972, LENOWISCO was the first Virginia planning district to receive special legislation giving the agency power to implement, as well as

plan, regional programs. The agency has participated at all stages in the planning, building, operating, and maintaining of a 260-acre industrial park and in obtaining tenants for the park. It has received funding approval for an environmental improvement program, which will include solid waste collection and disposal, street cleaning, junk car removal, roadside dump closing, mine land reclamation, and stream maintenance.

In FY 1973, LENOWISCO received \$36,000 in HUD nonmetropolitan district planning funds to update an overall program design, provide local planning assistance, and prepare a capital improvements and housing program for the region. Department of Agriculture and associated State agencies are cooperating in plans, studies, and projects of the Commission.

Neuse River (North Carolina)

The Neuse River Council of Governments was originally created in 1968 by the governments of nine counties in eastern North Carolina as an Economic Development District. Since then, it has assumed responsibility for additional areawide planning programs, including those concerned with comprehensive land use, health, criminal justice, and senior citizens' programs. Neuse River COG is also designated as a regional clearinghouse under U. S. Office of Management and Budget Circular A-95, and the Governor has named the organization as a "lead regional council," with responsibility for working with State agencies drafting the area component of a Statewide plan.

The agency's objectives are to conduct an areawide comprehensive planning program, promote regional economic development, and establish a framework for intergovernmental cooperation to provide the basic facilities necessary to growth of the region.

Work elements of the FY 1973 program were water quality management, completion of a population and socio-economic base study, a regional housing element, technical assistance for local governments in the area, and clearinghouse review of projects recommended for Federal funding. The HUD planning assistance grant totalled \$43,000 in FY 1973.

The Environmental Protection Agency has certified Neuse River COG to undertake a water quality management plan. To receive this designation, a nonmetropolitan district must have a satisfactory areawide planning organization that has completed a comprehensive land development plan and projected a satisfactory water and sewer program for the entire region served. Neuse River is the only nonmetropolitan district in North Carolina so certified in FY 1973.

Among other important responsibilities of Neuse River COG are assisting local governments in applying for State and Federal grants and loans, coordinating the work and programs at different governmental levels to

focus on an individual construction project or other enterprise, preparing a tourism-recreation plan for the region, and planning for and promoting new agricultural processing and marketing activities and marine products.

SCS provided soils maps for Neuse River agency planners in connection with housing site development requiring individual septic systems, and an areawide recreation study of SCS was used to develop information for planning recreation facilities development in the district. County Rural Development Committees, made up of Department of Agriculture and cooperating State and local agency personnel, are working with the Neuse River agency on several projects.

The Neuse River COG board of directors consists of representatives of the nine counties involved, with a smaller executive committee which operates the organization. The staff includes an executive director, several planners, and specialists in areas of work being emphasized by the agency. Sources of funding in addition to HUD include the U. S. Economic Development Administration, North Carolina Law and Order Committee, U. S. Department of Health, Education and Welfare, North Carolina Governor's Council on Aging, and local governments in the area, which finance about one-third of the total budget.

Neuse River COG is located at New Bern.

CUPPADD (Michigan)

CUPPADD stands for the Central Upper Peninsula Planning and Development District, an agency serving a six-county area in Michigan's Upper Peninsula and located at Escanaba. The board of directors consists of local elected officials and leading citizens representing a variety of interests in the area; the staff, of planning, engineering, and support personnel responsible for the many different programs being conducted by the agency.

The CUPPADD Commission has adopted a growth strategy for the region which envisions four intensively developed urban centers, complemented by a system of smaller communities of various sizes and functions. This strategy is embodied in policies contained in each functional plan in such fields as water system development, housing, recreation, industry growth, etc. The Commission has adopted a policy opposing the construction of new water or sewer systems which would be inconsistent with the growth strategy for the area.

A substantial proportion of staff effort is devoted to providing service to local government. This ranges from informal day-to-day response to inquiries, to the formal, long-term assistance provided in developing a comprehensive planning process at the county level. Assistance in securing

financial aid which involves preparation of applications, developing justification, obtaining clearances, coordinating consultants, etc., for local governments has traditionally been provided by the CUPPADD staff.

SCS has provided substantial assistance in the areas of soils data and interpretations. The Michigan Extension Service has jointly sponsored conferences and seminars, provided specialists and advice on information and education techniques and approaches. County Extension agents have been helpful in assuring participation by local groups and individuals in the planning process. The Forest Service, which administers a local National Forest, has also been helpful in providing information for the area within its jurisdiction. The Upper Peninsula Resource Conservation and Development project, which is relatively new, has organized its committee structure in a manner consistent with the three planning and development regions in the Upper Peninsula.

HUD contributed \$36,000 in nonmetropolitan planning funds to the CUPPADD program in FY 1973.

First District (South Dakota)

The First Planning and Development District of South Dakota covers a 10-county rural area in the east central part of the State. About 60 percent of the 100,000 population of the district reside in small cities and towns, the remainder on farms. There are 68 incorporated cities and towns in the area, 85 percent of which are under 1,000 population.

The First District program started in July 1971 as a pilot Federal-State effort to encourage substate regional planning and programming in South Dakota. The governing board of the district agency is composed of county commissioners, mayors, county planning officials, and citizen representatives. The current budget is \$300,000, derived from various Federal agencies and the State's Department of Educational and Cultural Affairs. In FY 1973, HUD contributed \$60,000 in nonmetropolitan district planning funds to the program. As local matching money, each county contributed \$4,000 annually. The agency staff consists mainly of professional planners who specialize in specific functional program areas, such as land-use planning, economic development, environmental issues, recreation, local government coordination, etc.

One of the district's main objectives is to create a sophisticated data and planning base coupled with qualified managerial and planning expertise which will enable small local units of government to effectively utilize Federal grant-in-aid programs, make their needs better known to State agencies and the legislature, promote intergovernmental cooperation in solving local problems that cut across jurisdictions, and improve local government management.

Among the principal projects undertaken by the district are: (1) a series of training and information seminars for citizens and civic leaders

concerning long-range planning and development trends and goals in the area; (2) creation of a system to remove junk machinery and cars from the farms, roadsides, and small communities; (3) a long-term program to eliminate pollution and restore the health of the many natural prairie lakes in the area and create a 10-county Resource Conservation and Development project to implement the program; (4) areawide sewer and water planning as a first step toward utilization of Farmers Home Administration and Environmental Protection Agency programs for water and sewer systems and waste water treatment; (5) industrial and recreational development; (6) a pilot State-sponsored effort to integrate social services, planning, and programming.

The First District agency has the advice and counsel of a Department of Agriculture advisory committee, composed of area representatives of FmHA, SCS, Agricultural Stabilization and Conservation Service (ASCS), and the South Dakota Extension Service. SCS district conservationists prepared soil capability maps for each county in the First Planning District pointing out areas where septic tanks, sewerage lagoons, and sanitary landfills were undesirable and were polluting the prairie lakes. FmHA provided planning money, as well as technical assistance, in the development of areawide sewer and water plans and financing of specific projects. The Extension Service cooperated in the junk machinery clean-up project and helped execute the training seminars for local citizens.

The district agency is headquartered at Watertown.
